ILUGBARO OLAOLUWA OLUSOLA

Frontend Engineer | Computer Science Student

olaoluwaolusola1206@gmail.com | +234 7048 782 107 | Ibadan, Nigeria | Portfolio | GitHub | LinkedIn

PROFESSIONAL SUMMARY

400-level Computer Science student at the University of Ibadan with a strong foundation in building robust web applications and complex logic systems. Passionate about clean code, scalable architecture, and bridging the gap between frontend interfaces and backend infrastructure.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, C, Java, HTML5, CSS3
Frameworks & Libraries: React.js, Next.js, Vite, Tailwind CSS, Zustand, TanStack React Query
Architecture & Concepts: Clean Code, REST API Integration, Algorithm Design, Manual State Management, Server-Side Rendering
Tools: Git, GitHub, npm, Figma, ESLint, Prettier, Jest

SELECTED PROJECTS

Dyna-learn | React, Vite, Tailwind CSS, ReactFlow dyna-learn.vercel.app

- Built an interactive AI tutor that renders a live concept graph on a ReactFlow canvas, with dagre auto-layout and custom node components
- Applied typed model responses as canvas actions (add, update, highlight nodes; generate quizzes), preserving user node positions instead of re-laying out the graph
- Managed hybrid text-to-speech across an audio player and the Web Speech API fallback, plus sessionStorage persistence, shareable lesson URLs, and SM-2 spaced repetition

HLR Network Simulator | React.js, Vite, Tailwind CSS

- Developed a GSM network simulation dashboard as part of an enterprise SIWES project for Airtel Nigeria (Huawei Project)
- Engineered simulated backend logic for GSM challenge-response authentication and Call Detail Record (CDR) billing
- Designed a dark NOC-style visual interface to represent high-contrast, data-dense enterprise monitoring environments

Chronos URL Shortener | React.js, Vite

- Built a streamlined frontend for a URL shortener with clean component hierarchies structured to consume REST API endpoints
- Implemented custom UX feedback: conditional shake-on-error animations and copy-to-clipboard functionality

Chess Engine | Vanilla JavaScript mephisto126.github.io/Chess

- Engineered a browser-based chess game from scratch with full move-validation and rule enforcement
- Designed a pseudo-legal and filtered-legal move-generation system enforcing king safety, check, and checkmate detection
- Built a custom UI using CSS Grid with live turn indicators, legal-move hints, and dynamic DOM updates

WORK EXPERIENCE

IT Intern (SIWES) | Huawei / Airtel Nigeria Jan 2026 -- Apr 2026

- Built and presented the HLR Network Simulator to internship supervisors, demonstrating GSM subscriber authentication and call/data flow across core network elements
- Trained on GSM network infrastructure, signalling protocols, and fault identification in a live telecom enterprise environment

IT Intern (SIWES) | SQI College of ICT 2025

- Provided technical support including network troubleshooting, system maintenance, and software updates for community center hardware

EDUCATION

B.Sc. Computer Science (Ongoing) | University of Ibadan | 400 Level | Ibadan, Nigeria | Expected Sept 2027

RELEVANT COURSEWORK

Database Systems, Data Structures, Intro to Algorithms, Systems Programming, Computer Architecture & Organization, OS I, Principles of Data Communication, Software Engineering
